

THE NATIONAL STANDARD-CHRONDEK HANDICAP STARTING SYSTEM

HANDICAP STARTING MEANS MORE INTERESTING DRAG RACING

The NATIONALLY ACCEPTED STANDARD five light count down starting system gives each driver an equal opportunity for a fair start.

SPECTATOR APPEAL

A separate set of lights for the spectators let them join the excitement on the starting line all the way to the GREEN light.

AUTOMATIC STARTING LINE OPERATION

Chrondek's invention of the ground-level light beams permit drivers, both stockers and dragsters, to stage themselves with no requirement for staging personnel. Staging is indicated by special lights atop the light stand. Jumpers are recorded on a RED LIGHT if they leave before the GREEN. The "CAPTURE-BEAM" system eliminates beating the red light. Timer starting signals come from the handicapper head. Interlocked red lights eliminate two red lights on drags.

ACCURATE HANDICAPPING

Electronic circuits with decade control permit handicapping from 1/100th second to 10 seconds.

GUARD BEAM NOW BUILT IN

Guard Beam prevents blocking the light beam and jumping the red light. Chrondek's new design includes this circuit, all you need to add are two photo-pickups and two light sources. Saves you money over earlier, separate designs.

REMOTE FOUL INDICATION

This new circuit records fouls on the panel of the new ELECTRA timer.

PRE-STAGER ACCESSORY

Tests at the Nation's biggest tracks shows the new PRE-STAGER really speeds up the event, and most important, reduces unintentional RED LIGHTS. Warns drivers of approach to the staging line. Permits exact staging. Acclaimed by the nation's leading drivers. A separate pair of pre-staging indicator lights are provided.

ITEM

PRICE LIST

65/F-1	For operation with Chrondek Dual Lane Timers Mod. 7-F or Electra Modification kits provided for start line pickups & light sources.	\$995.00
65/F-2	For independent operation, not connected to timer. Includes 65 F-1 above plus two lights & two pickups	\$1155.00
